

M.W. Watermark offers platforms which serve to raise the press, providing space below for single or multiple containers to receive the filter cake when the filter press is opened and the cake is released.

Larger presses can be equipped with an elevated platform that allows roll-off containers to be placed underneath. A “roll-off” platform can be very efficient when managing a large volume of filter cake, as the wheeled bins can be loaded onto a truck relatively quickly for haul-away.
