

MOBILE FILTER PRESS RENTAL UNITS

If portability is a factor in your solids-liquids separation project, then a trailer-mounted filter press from M.W. Watermark™ may be the best option. A mobile filter press can serve as the ideal choice for dewatering a slurry and managing sludge in a remote location.

The latest mobile unit addition to our rental fleet features 1200mm non-gasketed filter plates with a semi-automatic plate shifter. Filter cloths are included based on customer specification. The manifold design is air blowdown / evenfill, and is constructed of stainless steel.

The trailer itself includes several helpful features including flexible side curtains, air ride suspension, independently adjustable trailer levelers, stainless steel cake chute, extendable slider belt conveyor, walkways / railings / stairs, electrical control panel, water wash-down deck and mounted LED overhead lighting.
