

OPTIONAL TWO-HAND SHIFTER SAFETY INTERLOCK

The M.W. Watermark™ optional two-hand plate shifter safety interlock minimizes accidents by requiring that a recessed safety button be pressed at the same time as the shifter rocker switch. The plate shifter on this filter press does not activate unless the safety button is pressed at the same time. The safety interlock is also designed so that, if the safety button is released at any point, the shifter stops immediately. A guard around the safety button helps prevent inadvertent activation.

M.W. Watermark 630mm Filter Press with Optional Two-Hand Shifter Safety Interlock

**The Optional Shifter Safety Interlock Requires Both Hands to Be Used to Shift the Filter Plates
A Guard Around the Safety Button Helps Prevent Inadvertent Activation**
